## **PROJECT SPECIFICATIONS**

### **1. Purpose**

The purpose of the document is to outline the minimum requirements or specification for the designing, manufacturing, configuration, supply and delivery of electricity meters including technical onsite support to Mogale City Technician for its smooth operation and maintenance of its electricity supply business.

### **2. Objective**

Objective of the specification document is to ensure procurement of quality electricity meters and which are standardized for the seamless operation and maintenance of electricity supply services in Mogale City while embracing the advancement in metering technology. The document intends to outline the minimum requirements without limiting any advance technology that may be proposed in addition to the minimum requirements.

### **3. Applicability**

The specification will apply to electricity meters used by Mogale City to measure electricity consumed by Mogale City electricity customers.

### **4. Electricity meter specifications**

Various customers within Mogale City are supplied with electricity at various voltages. Electricity consumers are supplied at either 11 kV, 6.6 kV, 400V as three phase low voltage supply or 230V as single-phase supply. The supply voltage to a customer is dependent on the intended use e.g. industrial, domestic, commercial etc. depending on the supply voltage and the required capacity as well as the tariff charged.

In that case, there are different kind of meters for different customer connection capacity and voltage. Besides capacity and voltage, there also connectivity and communication priorities required depending on the economy of scale. Mogale City will procure the four main types of meters and a Data Concentrating Unit, although some may not necessarily have communication devices installed. There four kind of meters and the Data Concentrating Unit are listed as follows:

- Low Voltage Single Phase Meter with Split Customer Interface Unit (CIU)

- Low Voltage dual-phase or three-phase Phase Meter with/without Split Customer Interface Unit
- High Voltage and Low Voltage Poly-phase Meter configurable for either Direct or Current Transformer Connection
- High Voltage Poly-phase Meter suitable for Current Transformer Connection
- Data Concentration Unit

Mogale City is striving to establish a smart grid system and as such it is building up its metering infrastructure towards advanced metering infrastructure for remote measurement monitoring and control. The main principle behind the smart grid is communication and interoperability between devices in the system.

Since each manufacturer have their propriety design framework, there is however industry standards that are intended to ensure that devices from various manufacturers in one system are able to communicate and operate with each other to ensure that the objective of the smart grid is achieved. Mogale City will therefore enforce compliance with **the International Telecommunication Union Telecommunication Standardization Sector (ITU-T)** standard on G3 PLC network (the G3-PLC) and the standard smart device language that complies with the **DLMS/COSEM specification for data exchange for smart metering (IEC 62056)**, smart energy management and related fields.

Each of the main types of the meters will have specific requirements by Mogale City in regard to the following:

- |  |   |
